

Fred Miller's CONDO LAYOUTS

When downsizing from traditional house living to a high-rise condo, Fred had to take a different path to satisfy his model railroad layout interests. He decided on multiple shelf layouts in a variety of scales with primary emphasis on traction modeling.

In 2017 he started construction of a 3-layer, multi-scale model shelf diorama. Although the HO *Fox Hill Traction Co.* portion had the principal focus, several other larger scale dioramas were included. Subsequently N-Scale layouts were added

Fred's current interest in model railroad electronics prompted him to include animated control to most of the layouts. All layouts and dioramas are operated with DCC, some using Digitrax and others home-grown DCC.
